#### Ultra long, super strong and highly sensitive load lifting capacity

Four-section boom of high strength steel structure and optimized U-shaped cross section reduces weight significantly with higher safety rates. Jib mounting angles are 0°, 15°, and 30° which ensures fast and convenient change-over between different operating conditions so as to improving working efficiency of the machine.

#### Highly efficient, stable, energy-saving, and adjustable hydraulic system

Hydraulic system load feedback and constant power control is applied to provide strong lifting capacity and good micromobility. Unique steering buffer design is adopted to ensure stable braking operation.

#### Safe, stable, advanced, and intelligent electric control system

Self-developed controller SYMC specially for engineering machinery is configured. The adoption of CAN-bus full-digital network control technology ensures stable control signal, simple harness, and high reliability. Timely feedback of data information can achieve the monitoring of the overall working status in realtime; the load moment limiter equipped with the comprehensive intelligent protection system is used with accuracy within 3% to provide a comprehensive logic and interlock control, thus ensuring more safe and reliable operation.

	Superstructure
Cab	It is made of anti-corrosion steel plate with ergonomic design such as full-coverage soften interior, panoramic sunroof and, adjustable seats etc., and humanized design providing more comfortable and relaxing operation experience. The display of load moment limiter integrates main console and operation display system, which clearly show the data of all operating superstructure conditions for lifting operation.
<b>♦</b> Hydraulic system	<ul> <li>High-quality key hydraulic components such as main oil pump, rotary pump, main valve, winch motor, and balancing parts etc. are adopted to achieve stable and reliable operation of the hydraulic system. Superior operation performance is guaranteed by accurate parameter matching.</li> <li>Through the adoption of load sensitive variable displacement piston pump, pump displacement can be adjusted in real-time, achieving high-precision flow control with no energy loss during operation.</li> <li>Main valve has flow compensation and load feedback control function, enabling stable and convenient control of single action and combined action under different operation conditions</li> <li>Winch adopts the electronically controlled variable motor to ensure high operation efficiency. Max. single line speeds of winches is up to 130m/min.</li> <li>Slewing system is equipped with the integrated slewing buffer valve to ensure more stable starting and control of the slewing operation and excellent micro-mobility.</li> </ul>
• Control system	<ul> <li>With fully security protection system, winches are equipped with over-roll out limiter and height limiters to prevent over-rolling out and over-hoisting of steel rope, including tip-over and limit angle protection.</li> <li>Load moment limiter: The adoption of high intelligent load moment limiter system can comprehensively protect lifting operation, ensuring accurate, stable and comfort operation.</li> </ul>
Luffing system	<ul> <li>Dead-weight luffing provides more stable luffing operation at low energy loss.</li> <li>Luffing angle: -2°~ 80°.</li> </ul>
Telescopic system	■ Five-section boom is applied with basic boom length of 10.2m, full-extended boom length of 31m,jib length of 8m and lifting height of fully extended boom length of 32m respectively. Max. lifting height is 40m including jib. It is made of fine grain high-strength steel with U-shaped cross section and with telescopic operation controlled independent by ylinder rope.
Slewing system	360° rotation can be achieved with Max. slewing speed of 2.5r/min. Hydraulic controlled proportional speed adjustment is applied to provide stable and reliable operation of the system. Unique rotary buffer design ensures more stable braking.

	Superstructure
Hoisting system	<ul> <li>The adoption of pump and motor double variable speed control ensures high efficiency and excellent energy saving functionality. With perfect combination of winch balance valve and unique anti-slip technology, heavy load can lift and lower smoothly. Closed winch brake and winch balance valve effectively prevent imbalance of the hook.</li> <li>One main hook: 320Kg, one auxiliary hook: 90Kg, and the Max. lifting height are 25t and 5t. Wire rope of winch: left-handed wire rope 16-35W×7-1960USZ 200m.</li> </ul>
Safety system	<ul> <li>Load moment limiter: Load moment limiter calculation system based on lifting load mechanical model is established using an analytical mechanics method with rated lifting accuracy up to ±3% through on-line non-load calibration, providing full protection to lifting operation. In case of overload operation, system will automatically issue an alarm to provide safety protection for manipulation.</li> <li>Hydraulic system is configured with the balance valve, overflow valve and two-way hydraulic lock etc. components, thus achieving stable and reliable operation of the hydraulic system.</li> <li>Winch is equipped with over roll-out limiter to prevent over rolling-out of wire rope.</li> <li>Boom is equipped with height limiters respectively to prevent over-hoisting of wire rope.</li> <li>Boom head is equipped with anemometer and press sensor to indicate the working condition of whole crane in real-time, giving an alarm and cutting off the dangerous action automatically.</li> </ul>
Counterweight	■ Counterweight is 1800kg, no flexible counterweight.
The vice carrier frame	Designed and manufactured by SANY, anti-torsion box structure is welded by fine-grain high-strength steel plate, to provide strong load bearing capacity.
• Outriggers	■ Four-point supporting of the H-shaped outriggers ensures easy operation and strong stability with max. span up to 5.45m×6.2m. They are made of fine-grain high-strength steel sheet with horizontal single-cylinder rope line telescoping for outrigger. Vertical cylinder of outrigger adopts bi- directional hydraulic locks to improve safety.

- 1. Values listed in the table refer to rated lifting capacity measured at flat and solid gound under the lever state of the crane.
- 2. Value above heavy line shall be determined by strength of the crane and under this line shall be determined by stability of the crane.
- 3. Rated load values determined by stability shall comply with ISO 4305.
- 4. Rated lifting capacity listed in the table included weights of lifting hooks (320kg of hook )and hangers.
- 5. If actual boom length and range are between two values specified in the table, larger value will determine the lifting capacity.
